

Nireeha Padala

Andhra Pradesh, India | 7416159501 | nireehap@gmail.com
www.linkedin.com/in/nireeha-padala-6a71ab2a0 | <https://github.com/Nireehapadala>

EDUCATION

Vignan's Foundation For Science Technology And Research, Vadlamudi B Tech (Bachelor of Technology)_Computer Science Engineering (CSE) (8.1 CGPA)	2023 - 2027
Sasi Junior Collage for girls, Velivenu Intermediate_MPC (97.1%)	2021 - 2023
AKRG High School, Nallajerla Central Board Of Secondary Education of Certificate (62.0%)	2020 - 2021

SKILLS

Frontend: HTML, CSS, JavaScript, React.js
Backend: Express, Node.js
Languages: c , python
Databases: SQL Mongodb
Other skills: C, Prompt Engineering, NumPy, OOPs, Python, Operating Systems , MS-Excel, MS-Powerpoint, MS-Word, English Proficiency(Written&Spoken), Problem Solving and Analytical Thinking, Team Collaboration and Communication Skills

PROJECTS

Restaurant Reservation System (<https://github.com/Nireehapadala/restuarant-reservation-system>)

- Login page with customer details
- Selection of preferred restaurant
- Particular restaurant menu card and items selection with quantity then redirects to total amount and booked date

Technologies used: HTML, CSS

Digital-Consent-Manager (<https://digital-consent-manager-evqr.vercel.app/login>)

- Developed a web-based consent management system allowing users to securely give, update, or withdraw data usage consent with real-time state updates.
- Implemented modular React components, controlled forms, and conditional rendering for dynamic consent handling.
- Added responsive UI with CSS and event-driven state updates for accurate tracking of user consent status.

Tech: React JS, JavaScript, CSS

Realtime audio and text processing (<https://github.com/Nireehapadala/Text2Vision-AI>)

RealTime Audio & Text Intelligence is a Python-based project that integrates several natural language processing and speech recognition capabilities into a single Jupyter notebook. It allows users to convert MP3 audio (such as YouTube lectures) to text using Google's Speech Recognition API, summarize long passages with transformer models, analyze sentiment, translate English text to Hindi, and answer questions based on a given context using state-of-the-art pre-trained models from Hugging Face. Built with libraries like SpeechRecognition, pydub, and transformers, this toolkit offers a practical end-to-end pipeline for audio and text processing tasks. Ideal for educational, analytical, and assistive applications, this project showcases how speech and text AI can work together in real time.

Technologies used: Python

Real-Estate and Rental Management ([EstateHub - Property Rental Platform](#))

Designed and developed a full-featured Real-Estate & Rental Management System supporting property listings, rental bookings, tenant–owner communication, and admin oversight. Implemented user authentication, role-based permissions, and advanced property search with filters. Developed RESTful APIs for managing properties, payments, reviews, and rental history. Ensured secure data handling, responsive UI, and smooth user experience across all roles (Admin, Owner, Tenant).

Tech Stack: React JS / HTML / CSS / JavaScript, Node.js, Express.js, MongoDB, REST APIs, JWT Authentication

CERTIFICATE

Cambridge English – Preliminary English Test (B1)

Internationally recognized certification demonstrating intermediate English proficiency (reading, writing, listening, speaking) for academic and workplace communication.

Generative AI-Google Cloud:

Explored Google Cloud’s Generative AI tools including Vertex AI, model tuning, prompt design, and embeddings. Built small AI workflows such as text generation, summarization, and chatbot-style interactions using foundation models on Google Cloud.

ACHIEVEMENTS

Honour in coding competency

I have been recognized for my excellence in coding competency, demonstrating strong problem-solving abilities and proficiency across multiple programming languages. Through continuous learning, hands-on project development, and active participation in coding challenges, I have built a solid foundation in data structures, algorithms, and software engineering best practices. This recognition reflects my commitment to writing efficient, clean, and well-documented code, as well as my capability to work on real-world projects, debug complex issues, and enhance coding standards. It also reinforces my dedication to continuous improvement and contributing meaningfully to the technology community.
